This package includes the Enhanced Pearson eText and the loose-leaf version.

Here are practical, realistic curricular adaptations for ensuring successful inclusion of students with special needs. This highly readable, well researched, and current resource uses a developmental focus, rather than a disability orientation, to discuss typical and atypical child development and curricular adaptations, and encourage the treatment of students as children first, without regard to their learning differences. This integrated but non-categorical approach assumes that children are more alike than different in their development, and avoids the negative impact of labeling children with disability categorical names. The inclusive focus assumes that attitudes, environments, and intervention strategies can be accepted so that all young children with special needs can be included. Combining systematic instruction with naturalistic instruction embedded in daily activities, *Adapting Early Childhood Curricula for Children with Special Needs, 9/e* provides numerous how-to strategies derived from evidence-based practices, making it invaluable as a text today and a resource to take into the classroom tomorrow. Future professionals get examples of practical, realistic curricular adaptations that make inclusive education successful; see how to deal effectively with families and others by developing essential skills in listening, communication, conflict resolution problem solving, and biases and prejudices. Unique to this text is a section including practical recommendations for working effectively with paraprofessionals. Comprehensive without being overwhelming, the book encourages reflective practice. The Enhanced Pearson eText features embedded video and internet resources.

Improve mastery and retention with the Enhanced Pearson eText*

The Enhanced Pearson eText provides a rich, interactive learning environment designed to improve student mastery of content. The Enhanced Pearson eText is:

- **Engaging.** The new interactive, multimedia learning features were developed by the authors and other subject-matter experts to deepen and enrich the learning experience.
- **Convenient.** Enjoy instant online access from your computer or download the Pearson eText App to read on or offline on your iPad® and Android® tablet.*
- **Affordable.** Experience the advantages of the Enhanced Pearson eText along with all the benefits of print for 40% to 50% less than a print bound book.

** The Enhanced eText features are only available in the Pearson eText format. They are not available in third-party eTexts or downloads.*

**The Pearson eText App is available on Google Play and in the App Store. It requires Android OS 3.1-4, a 7" or 10" tablet, or iPad iOS 5.0 or later.*

FOREWORD For over three decades, this text, *Adapting Early Childhood Curricula for Children with Special Needs*, has served as a major resource for early educators, related services personnel, and faculty members who teach them. Its tremendous success lies in its blend of developmental and learning theories, with practical suggestions for delivery of services to young children with special needs and their families. While today's children with special needs are enrolled in the full range of early childhood education programs, many of these programs have limited exposure to strategies for modifying Early Childhood Education provides children to learn with diversity. Children develop healthy social interaction by mixing with other kids from different cultures and backgrounds. Thus, early learning gives them positivity, self-esteem, and self-confidence. Importance of Early Childhood Education. We all know that learning begins from our very first cry, from the moment of our birth. And the early years of a child are the most important years for their physical and internal development. Now, let's list some importance of ECE. 1. Neurological Developments. Early childhood is a critical time for Adapting early childhood curricula for children with special needs. Item Preview. Identify children with developmental needs and work out interventions that engender involvement within the problem area. 8. The action points cover a wide range of interventions. At least three times a year, children are screened, with a five point scale for each of the dimensions. For children falling below level 4, teachers proceed with further observations and analyses (Laevers, 1997). As an extension of the POMS, the levels of development are assessed in 8 domains with a 5-point scale: gross and fine motor development, representation through language, representation through visual arts, understanding the physical world, social competence, mathematical and logical thinking, self-organisation. A child has special educational needs if they have a learning problem or disability that make it more difficult for them to learn than most children their age. They may have problems with schoolwork, communication or behaviour. Parents can get help and advice from specialists, teachers and voluntary organisations. How schools can help children with special educational needs. A school can usually provide help and sometimes uses specialists. If your child has special educational needs, they may need extra help: with schoolwork. Your child's early years are a very important time for their physical, emotional, intellectual and social development. When the health visitor or doctor makes a routine check, they might suggest that there could be a problem.

Adapting early childhood curricula for children with special needs. Item Preview. remove-circle. Research demonstrates young children with autism and other developmental disabilities can benefit from participation in play activities with peers. Play provides opportunities to increase social skills across developmental domains in an integrated manner and provides opportunities to develop a sense of belonging and friendship; these goals are critical for young children with disabilities. Early childhood development is an important point for a productive and regular life of a child who has special needs. Because of that, studies on brain and brain development and process have revealed that it is compulsory to provide support services for pregnant women and women who have newborn babies up to three years old. Some children may be reluctant to include their peers in conversations or in playground activities. A lack of understanding can result in hurtful remarks or bullying. To deal with this, we have a plan for each stage of school, to make sure the atmosphere is supportive and that everyone feels included and understood. We have an early intervention plan that includes all preschoolers (age three to five) and improves everyone's abilities. Our early preschool classes include SEN students with mild disabilities. These children can cope academically with the curriculum requirements, but need extra support. They may have hearing impairments, autism at mild ranges within the spectrum, hyperactivity, attention deficit disorders, or speech and communication delays. Start by marking "Adapting Early Childhood Curricula for Children with Special Needs" as Want to Read: Want to Read saving! Want to Read. This comprehensive, practical text is built on solid theory and evidence-based practices from both the fields of Special Education and Early Childhood Education. When the first edition was conceived in 1980, the authors encountered students who either had a strong special education background or a strong early childhood (child development) background. Each group had a lot This comprehensive, practical text is built on solid theory and evidence-based practices from both the fields of Special Education and Early Childhood Education.
