An excellent navigation text for either the navigator who knows the rudiments and wants to learn about the whys and wherefores or for the studious beginner who wants to learn not only how to navigate, but also the geometrical background of celestial navigation. And each chapter has interesting notes on the lore of navigation. In any case, this book can teach you to navigate using time, the sextant, the Nautical Almanac, and a hand calculator with trigonometric functions, the latter eliminating the need for sight reduction tables, although they are by no means abandoned from his instructions. T Knowing that O'Brian era navigators and midshipmen did and learned navigation with use of only an almanac and logarithm tables? I looked for a method to do sight reductions using a scientific calculator. "Celestial for the Cruising Navigator" answers that need. I also believe texts designed for amateurs (Sail Boat Types) should be enjoyable to read and be easily seen as being practical and useful to you. Merle B. Turner does an excellent job here. A comprehensive treatment of celestial navigation that is less encyclopedic than "Dutton's" or "Bowditch", but more thorough than a how-to primer. Background of nautical astronomy is stressed, so one learns why as well as what. Celestial for the Cruising Navigator quantity. Add to cart.
