Everyone in the modern day, 12,000 years after the prologue, are fully aware of Atlantis's existence. It's called Atlantia, not Atlantis, too. It was the home of the highly evolved Shadow Angels, who treated humanity like cattle to be harvested and have their life energies fed off of. They were sealed away after humanity won the initial war. Stephen Lawhead's Pendragon Cycle combines the fall of Atlantis, the Roman withdrawal from Britain, and Arthurian legend (heavily drawn from Geoffrey of Monmouth's History of the Kings of Britain) into one giant advertisement for why Christianity is better than pagan religion. Marion Zimmer Bradley's The Mists of Avalon uses Atlantis as the source of the old pre-Christian British religion, or at least the lore of the priestesses and bards. You see, Atlantis existed for over 200,000 years. The vast majority of the Atlantean times were epochs of Light! Only the final phase, the period from 17,500 BC to 10,500 BC was in your terms, a dark era, but one rich in lessons. The Golden Age. And so in the days after the second break up of Atlantis, the benevolent government rule by a Kingdom passed into the phase of a Confederation "State Governments, in your present terms, that ruled each of the Islands. In 2010, he predicted that the unrest would get serious around 2020, and that it wouldn’t let up until those social and political trends reversed. Diamond and Harari aimed to describe the history of humanity. Turchin looks into a distant, science-fiction future for peers. In *War and Peace and War* (2006), his most accessible book, he likens himself to Hari Seldon, the “maverick mathematician” of Isaac Asimov’s Foundation series, who can foretell the rise and fall of empires. True History Of Atlantis. Note: The cataclysms of fire and water of worldwide extent of which we speak in this essay are strictly scientific. They are widely attested in the geological record, being generally accepted by modern Geology. So are the massive extinctions of all sorts of species, and particularly of the large mammals which took place at the end of the Pleistocene Ice Age, some 11,600 years ago. But these anthropoids soon spread all over Eurasia and beyond, reaching the Far Orient and Australia, inclusive, by about 1 million years ago or even more. Indonesia, the site of Eden. All this took place during the Pleistocene, the last of the geological eras, which ended a scant 11,600 years ago. Though long by human standards, this is but a brief moment in geological terms. This was the final launch in the Space Shuttle Program. Though the launch is finished, work is just beginning for staff at NASA’s Goddard Space Flight Center more than 800 miles away from the launch pad. Goddard employees will work around-the-clock to guarantee the four astronauts aboard Atlantis have constant, uninterrupted lines of communication with Mission Control. The careful dance of satellite relays necessary to keep channels open requires global coordination, but it all comes together in Goddard’s Network Integration Center.
