Bird Brains presents these bright, brassy, and surprisingly colorful birds in a remarkable collection of full-color, close-up photographs by some two dozen of the world's best wildlife photographers. Savage's lively, authoritative text describes the life and behavior of sixteen representative corvid species that inhabit North America and Europe. Drawing on recent research, she describes birds that recognize each other as individuals, call one another by "name", remember and relocate thousands of hidden food caches, engage in true teamwork and purposeful play, and generally ...[^] "Here is an excellent gathering of intelligence, expert opinion and bird observations, with color photos creating a lavish backdrop." It feels like there should be a fable about this. Perhaps "How the crow learnt to mak Bird Brains presents these bright, brassy, and surprisingly colorful birds in a remarkable collection of full-color, close-up photographs by some two dozen of the world's best wildlife photographers. Savage's lively, authoritative text describes the life and behavior of sixteen representative corvid species that inhabit North America and Europe. Drawing on recent research, she describes birds that recognize each other as individuals, call one another by "name", remember and relocate thousands of hidden food caches, engage in true teamwork and purposeful play, and generally ...Â "Here is an excellent gathering of intelligence, expert opinion and bird observations, with color photos creating a lavish backdrop." â€ Bookwatch. The corvids (ravens, crows, jays, magpies, etc.) and psittacines (parrots, macaws, and cockatoos) are often considered the most intelligent birds, and among the most intelligent animals in general; pigeons, finches, domestic fowl, and birds of prey have also been common subjects of intelligence studies.Â Instead, it seems that birds use a different part of their brain, the medio-rostral neostriatum/hyperstriatum ventrale (see also nidopallium), as the seat of their intelligence, and the brain-to-body size ratio of psittacines (parrots) and corvines (birds of the crow family) is actually comparable to that of higher primates. [47].Â Parrots and the corvid family of crows, ravens, and jays are considered the most intelligent of birds.
