Energy derivatives contract structures. The bulk of derivatives trading is in products that are based on a financial concept or product, such as FX rates, interest rates and company stocks. In contrast, trading in energy derivatives, and commodity derivatives in general, means that the underlying is a physical product. Optimal correlation-based hedge - both volume and value hedge ignore the possibility that the price of the hedge product may not move in tandem with the exposure. Conclusion Weather derivatives can be extremely effective hedges of volumetric risk. The weather hedge presented above is highly stylised and in our experience, our clients often seek hedging strategies that manage extreme (tail) weather risks.
