Extreme weather or extreme climate events includes unexpected, unusual, severe, or unseasonal weather; weather at the extremes of the historical distribution—the range that has been seen in the past. Often, extreme events are based on a location's recorded weather history and defined as lying in the most unusual ten percent. In recent years, growing evidence suggests that human-induced global warming is increasing the periodicity and intensity of some extreme weather events. Confidence in the

Extreme weather - heavy rainfall Heavy rainfall is one of the most frequent and widespread severe weather hazards to affect New Zealand. It is defined as rainfall greater than 100 mm in 24 hours. source: niwa.co.nz.Â Extreme weather includes unexpected, unusual, unpredictable, severe or unseasonal weather; weather at the extremes of the historical distributionâ€”the range that has been seen in the past. Often, extreme events are based on a locationâ€™s recorded weather history and defined as lying in the most unusual ten percent.

Ask: What do you know about extreme weather on Earth? Have students brainstorm a list of weather-related words and phrases. Write their responses on the board. Then ask students to sort the list into logical categories, such as types of weather, tools to measure weather, and effects of weather. 2. Discuss a photo gallery of extreme weather. Tell students they will look at a photo gallery of extreme weather and then watch a video about weather. Display the photo gallery Extreme Weather. Extreme weather includes unexpected, unusual, unpredictable, severe or unseasonal weather; weather at the extremes of the historical distribution—the range that has been seen in the past.[1] Often, extreme events are based on a location's recorded weather history and defined as lying in the most unusual ten percent.[2] In recent years some extreme weather events have been attributed to human-induced global warming,[3][4][5] with studies indicating an increasing threat from extreme weather in the future.[6][7]. Extreme weather causes a lot of damage. Unfortunately we can't eliminate this natural hazard, but we can reduce its impact. One way to lessen the impact is by being prepared. Coastal areas experience high waves from extreme weather events such as hurricanes. There are several techniques engineers use to protect coastal areas from flooding or erosion. Seawalls are concrete walls built along beaches that experience large waves. Hurricanes, tornadoes, droughts, floods, or freezing temperature — extreme weather — is when something in weather is abnormal and usually causes casualties. It can endanger people's lives or damage their crops or property. The weather at anytime can be described by temperature, wind speed, atmospheric pressure, and precipitation (rain, hail, or snow). The average temperature of the world is about 59°F (15°C), but some places are much colder than this, other places much warmer. The average rainfall
