Chronic obstructive pulmonary disease (COPD) is a type of obstructive lung disease characterized by long-term breathing problems and poor airflow. The main symptoms include shortness of breath and cough with sputum production. COPD is a progressive disease, meaning it typically worsens over time. Eventually, everyday activities such as walking or getting dressed become difficult. Chronic bronchitis and emphysema are older terms used for different types of COPD. The term "chronic bronchitis" is still used for chronic bronchitis. This is the currently selected item. Respiratory distress. Cystic fibrosis is a pulmonary disease that has similar symptoms as disorders discussed in the video. Comment. Comment on Sean P's post "Cystic fibrosis is a pulmonary disease that has si..." Asthma in origin is an inflammatory disease and yet beta2 adrenergic agonists give relief by relaxing bronchiolar smooth muscle - how does this fit into the scheme shown in the video that does not take this into consideration? Pulmonary emphysema is identified by marked overdistention of alveoli along with destruction of supporting alveolar and interstitial structures. Computed tomography is currently the best way to diagnose the disease, and treatment includes a combination of bronchodilators and anti-inflammatory medications. Because it causes permanent damage, prevention is key. Two major forms of pulmonary emphysema are generally recognized. Animals with pulmonary emphysema may present with labored breathing and coughing, and physical examination may reveal abnormal breath sounds such as wheezes and crackles.

31 Several studies have found the link between OS and various lung disorders, including asthma, chronic obstructive pulmonary disease (COPD), acute pulmonary distress syndrome, and TB. 32,33 Further, poor dietary intake of micronutrients, malabsorption, poor immunity and altered metabolism might result increased free radical generation in PTB patients.Â Background: Pulmonary tuberculosis (PTB) is a highly infectious dreadful disease caused by mycobacterium tuberculosis (MTB). Numerous studies reported free radicals activity, antioxidant status and lipid profile in PTB patients, but previous studies have lacunae in comparing the biochemical variables between before and after anti-tubercular therapy (ATT) supplementation to PTB patients. â–°Larynx Diseases. Laryngitis. Voice Disorders: Functional and Organic Dysphonia. Mediastinal Cysts and Tumors. Nicotine Addiction.Â Differential diagnosis of COPD exacerbations includes pulmonary embolism, pneumothorax, left ventricular failure, worsening of bronchiectasis or exacerbation of asthma, and lower respiratory tract infection. Distinguishing between COPD and asthma may occasionally be difficult and even lead to a diagnosis of asthma-COPD overlap.
