Description:

As the first modern physical chemistry textbook to cover quantum mechanics before thermodynamics and kinetics, this book provides a contemporary approach to the study of physical chemistry. By beginning with quantum chemistry, students will learn the fundamental principles upon which all modern physical chemistry is built. The text includes a special set of "MathChapters" to review and summarize the mathematical tools required to master the material. Thermodynamics is simultaneously taught from a bulk and microscopic viewpoint that enables the student to understand how bulk properties of materials are related to the properties of individual constituent molecules. This new text includes a variety of modern research topics in physical

chemistry as well as hundreds of worked problems and examples.

Chemistry : a molecular approach / Nivaldo J. Tro, Travis D. Fridgen, Lawton E. Shaw. Canadian ed. Includes bibliographical references and index. ISBN 978-0-13-511521-3. 1. Chemistry, Physical and theoretical—Textbooks. I. Fridgen, Travis D. (Travis David), 1970—. II. His Ph.D. in physical chemistry is from Queen's University, where he studied ion and neutral spectroscopy in a cryogenic matrix. environment. In this new textbook on physical chemistry, fundamentals are introduced simply yet in more depth than is common. Topics are arranged in a progressive pattern, with simpler theory early and more complicated theory later. General principles are induced from key experimental results. Some mathematical background is supplied where it would be helpful.
